and latex-tikz codes from

[https://github.com/asishcs2011010/demo/blob/main/assignment-4/assignment-4\(6\).tex](https://github.com/asishcs2011010/demo/blob/main/assignment-4/assignment-4(6).tex)

$$G(y) = \begin{cases} 0 & y < 0 \\ \frac{2\sqrt{y}}{3} & 0 \leq y < 1 \\ \frac{\sqrt{y}+1}{3} & 1 \leq y < 4 \\ 1 & y \geq 4 \end{cases}$$

The plot of CDF is given in the Figure 0

Fig. 0: CDF of Y

QUESTION NO

gov/stats/2015/statistics-I(1), Q.1(C)

QUESTION

1)(c) Let X have pdf

$$f(x) = \begin{cases} \frac{1}{3} & -1 \leq x < 2 \\ 0 & \text{otherwise} \end{cases}$$

Obtain the cdf of  $Y = X^2$

SOLUTION

CDF of X is defined as,

$$F_X(x) = \Pr(X \leq x) \quad (0.0.1)$$

The cdf of  $Y = X^2$  is given by  $G(y) = F_X(y)$

$$F_X(y) = \Pr(X^2 \leq y) = \Pr(-\sqrt{y} \leq X \leq \sqrt{y}) \quad (0.0.2)$$

$$G(y) = \int_{\max(-1, -\sqrt{y})}^{\min(2, \sqrt{y})} \frac{1}{3} dx \quad (0.0.3)$$

As bounds of integral should also remain within the support of the random variable X.

so when  $0 \leq y < 1$ , we have

$\max(-1, -\sqrt{y}) = -\sqrt{y}$ , and when  $1 \leq y$  it is -1. similarly the upper limit is  $\sqrt{y}$  when  $y < 9$  and 3 otherwise
